

Recommended VS Code Setup

Below is a list of recommended plugins to use while developing Vegan Hacktivists projects.

Crucial

- [EditorConfig for VS Code](#) - This adds [EditorConfig](#) support to VS Code to set up project-specific rules for indentation and other things.
- [ESLint](#) - Integrates [ESLint](#) functionality to VS Code for real-time warnings/errors about your code.
- [Laravel Pint](#) - Integrates [Laravel Pint](#) into VS Code to format your PHP code appropriately.
- [laravel-blade](#) - Adds syntax highlighting for [Blade template](#) files.
- [Prettier - Code formatter](#) - Automatically formats code according to the project's [Prettier](#) configuration file.

Highly Recommended

- [DotENV](#) - Syntax highlighting/autocomplete for `.env` files.
- [Laravel Extra Intellisense](#) - Adds Laravel-specific Intellisense functionality for a much better autocomplete experience (routes, config options, environment variables, etc.).
- [PHP Intelephense](#) - Similar to the above, but for PHP code in general.

Nice to Have

- [Laravel Blade Spacer](#) - Adds automatic spacing for [Blade template](#) markers (e.g. `{{ }}`).
